Key features and benefits

- Controls black ants
- Formulated for nest eradication
- Convenient, discreet, long term control
- Indoor and outdoor use

Controls black ants

Maxforce® LN is a ready to use ant bait which has been specifically developed for the control of black ants. The Maxforce® LN ant bait consists of sugar and honey combined with the active ingredient imidacloprid forming part of the special bait matrix which attracts the ants to feed on it and take the bait back to the colony. Colony eradication can be expected within 7-14 days after treatment, depending on the size of the infestation.

Indoor and outdoor use

Maxforce® LN can be used in and around domestic housing, commercial and industrial premises, public swimming pools, terraces, patios and pathways. Maxforce® LN should be placed in a horizontal position where ants can be seen foraging for food. Indoors, trails are often seen emerging from underneath doors, windows or cracks and crevices. As Maxforce® LN is presented in a bait station, it is ideal for sensitive areas.

Application rates

Apply 1 to 4 bait stations per nest. Place bait stations next to nests where ants forage so that the bait can be taken back to the nest. If the nest cannot be found, apply 1 to 4 bait stations per 5 square metres.

Protecting tomorrow today

Maxforce® LN has been designed to offer a highly targeted approach with a low environmental impact. The effectiveness of the active ingredient allows a very small amount of product to be used per nest. Being such an innovative product also ensures that Maxforce® LN is a low risk to people and pets.
