

K-Obiol® EC 25

Bayer Environmental Science is delighted to introduce K-Obiol® EC25 Grain Protectant (MAPP 13573).

K-Obiol® EC25 contains the **modern pyrethroid** Deltamethrin synergised with Piperonyl Butoxide. This Pyrethroid formulation is an ideal alternative to organo-phosphorus formulations.

K-Obiol® EC25 is a liquid grain protectant for the control of stored product pests including crawling insects such as grain weevils, flour beetles, grain borers, sawtoothed grain beetles, bean weevils and flying insects such as warehouse moths, rice moths, indian meal moths and grain moths.

Established for many years within mainland Europe, K-Obiol® EC25 is available in the U.K. as an admixture to grain and pulses. K-Obiol® EC25 is available in 1 litre pack which is to be mixed with 99 litres of water which treats 100 tonnes of grain.

K-Obiol® EC25 also has a registration allowing a **Fabric of the building** – Pre-Harvest treatment.

K-Obiol® EC25 provides protection for up to **12 months**; there is no withholding period governing the use of the grain.

K-Obiol® EC25 is accepted for use by NABIM and the BRI.

Please contact our office or Clive Evers on 07973 210232 for further information or to request a CD ROM. Alternatively please visit our website at www.pestcontrol-expert.com
