Quick Bayt®

DEAD FLIES… DEAD QUICK

A successful fly control programme relies on being able to measure the quantity of flies- not an easy task! Bayer Environmental Science achieves this by marking a 1m² area with tape on a wall that flies use as a rest area. We then count the number of flies that are in that area at a regular time and record the numbers. In this way you can monitor the efficacy of the treatment you are performing.
Below is a Treatment Record sheet for this purpose. Keep it close to the count area.

Date and time	No. of flies	Weather conditions	Special circumstances	Hygiene practice

ALWAYS READ THE LABEL. USE PESTICIDES SAFELY. Quick Bayt® contains imidacloprid 0.5%. Quick Bayt® is a trademark of Bayer.
